

alto

alto new product

November 27, 2024 · [read online](#)

Hi everyone,

I've just released new small app for macOS. It's called alto.start.

It's a Safari extension that changes your new tab. Now you can see (and complete) your Apple Reminders every time you open new tab.

On top of that there is extra functionality to show you tasks that you need to do today and also it shows your recurring tasks.

This is just a first version. If people like it I will add more things to it: calendar events, recent links to Apple Notes and so on.

Demo is here <https://www.loom.com/share/b6dff89ce79d4b6c890014484671627a>

You can install it from AppStore <https://apps.apple.com/us/app/alto-start/id6738673683?mt=12>.

Please try and let me know what you think.

PS By the way, if you use alto.computer and want to unlock exported there is 30% discount till Dec 2. FRIDAY2024.

Anton
