Alto. Sept 19 updates

September 19, 2024 · [read online](#)

Hi everyone,

Anton here.

First few questions for you:

- how do you use alto.computer app currently? Eg linking, publishing, exporting?
- do you need this app to be in a menubar or you rarely use it that way?
- would you prefer more features inside one app(current one), or different apps? Eg alto.photos for publishing photos and so on?
- what is confusing about the app?

Trying decide on the direction of development, so was curious about your thoughts.

By the way, I recently started publishing small iOS apps:

- <https://apps.apple.com/us/app/alto-daily/id6478018751?mt=12> - track your habits in Apple Reminders
- <https://apps.apple.com/us/app/alto-calendar/id6670268848> - share your free/busy time with your family and friends
- <https://apps.apple.com/us/app/alto-location/id6683306000> - track your location in your dedicated Apple Calendar and stay on top of some visa restrictions when you travel

Planning to publish few more, but alto.computer and also.so are my main focus. I do this extra apps with the hope to get more people discover alto.

Anton
