Alto updates. Nov 8. New small tool

November 8, 2024 · [read online](#)

Hi everyone,

I just launched small new product which I announced one year ago but never finished.

It works in a similar way to Alto which allows you to publish Apple Notes online.

My new product is called public.me <https://public.me/>. It allows you to have microblog using iMessage.

My page is here <https://public.me/anton>. It's like twitter but I can post on my devices without actually opening twitter.

So you send a message to hi@public.me address and it's gets published.

Here is demo how it works https://www.youtube.com/watch?v=R_Ln60lhJGY

You can signup here <https://public.me/blog>. It's early days. But you already can share text messages, photos, audios. I'll add more things later.

PS Also, as always. If something is missing for you in alto.so or alto.computer app - let me know. I release changes there every week. But can prioritize things based on your messages.

Anton
